

Key Features of IMIGIT™

- Stores millions of pages on-line
- Provides 5 second access to any document, report, or page
- Runs on a standard server computer running either Windows 2003 Server or RedHat Linux Enterprise
- Imaging server is independent from the application servers
- COLD module allows documents to be captured electronically and indexed automatically directly from other software programs
- Free form indexes provide great flexibility for search and retrieval
- Provides powerful search algorithms, including Boolean and “fuzzy” search capabilities
- Images can be printed, faxed, or emailed directly from the imaging system
- Works with virtually any Windows, Linux, or UNIX accounting software
- Imaging “looks like” a standard network printer to the other software programs
- Documents can be accessed 24x7 using the Internet by authorized employees or customers
- Improves productivity for A/R, A/P, and HR departments
- Can reduce paper storage requirements by as much as 80%
- Can reduce the amount of time required to process A/P invoices by as much as 50%
- Uses bar codes to automatically match signed paper deliver documents with the original electronic copy
- Advanced OCR software can “read” data from the scanned documents
- Documents can be permanently archived to removable hard disks, DVDs, CDs, or optical disks
- Installation, training, and support all come from one company
- The company that developed the imaging software has been in business for more than 25 years
- There are currently more than 4,000 sites running the imaging software
- The software is continually updated and enhanced
